

What is CyberQP?

CyberQP is an easy way for you to have control over your work account passwords. Our simple Mobile app gives you the ability to change your computer password, Office365 password, or both at the same time!

How does it work?

STEP ONE:

To get started, you will receive a welcome email from your IT Team.

STEP TWO:

The email will contain a link to enter and confirm your phone number, as well as a link to download our mobile app.

STEP THREE:

To sign into the app, just enter your email address and press "Get Started".

STEP FOUR:

You will then receive an SMS code on your mobile device, which you'll enter into the app like a password. And that's it! You're now signed into our mobile app, and you can change your account password at any time. It will even display the password requirements for you, as well as your account status. If your account gets locked out for too many incorrect password attempts, you can even unlock it with a single button. It's that easy!

STEP FIVE:

For added security, your IT Team can also send a push notification to request confirmation of your identity. You can confirm this by simply tapping "Approve" when prompted.

CyberQP redefines Zero Trust Helpdesk Security with leading-edge Privileged Access Management (PAM) and End-User Access Management (EUAM) solutions. Our platform enables secure elevated access for both technicians and end users, along with robust self-serve and identity verification capabilities. Backed by SOC 2 Type 2 certification, we empower IT professionals to eliminate identity and privileged access security risks, enforce compliance, and enhance operational efficiency. Our mission is simple: "Empowering Access, Redefining Privilege" for help desks around the globe. Learn more <https://cyberqp.com/product-tours/>
